Participant and Budget Analysis

Total Participants

774K

Avg Annual Plan Budget

\$85,000

Total Estimated Budget

65.63bn

Select State

All

Select Disability Group

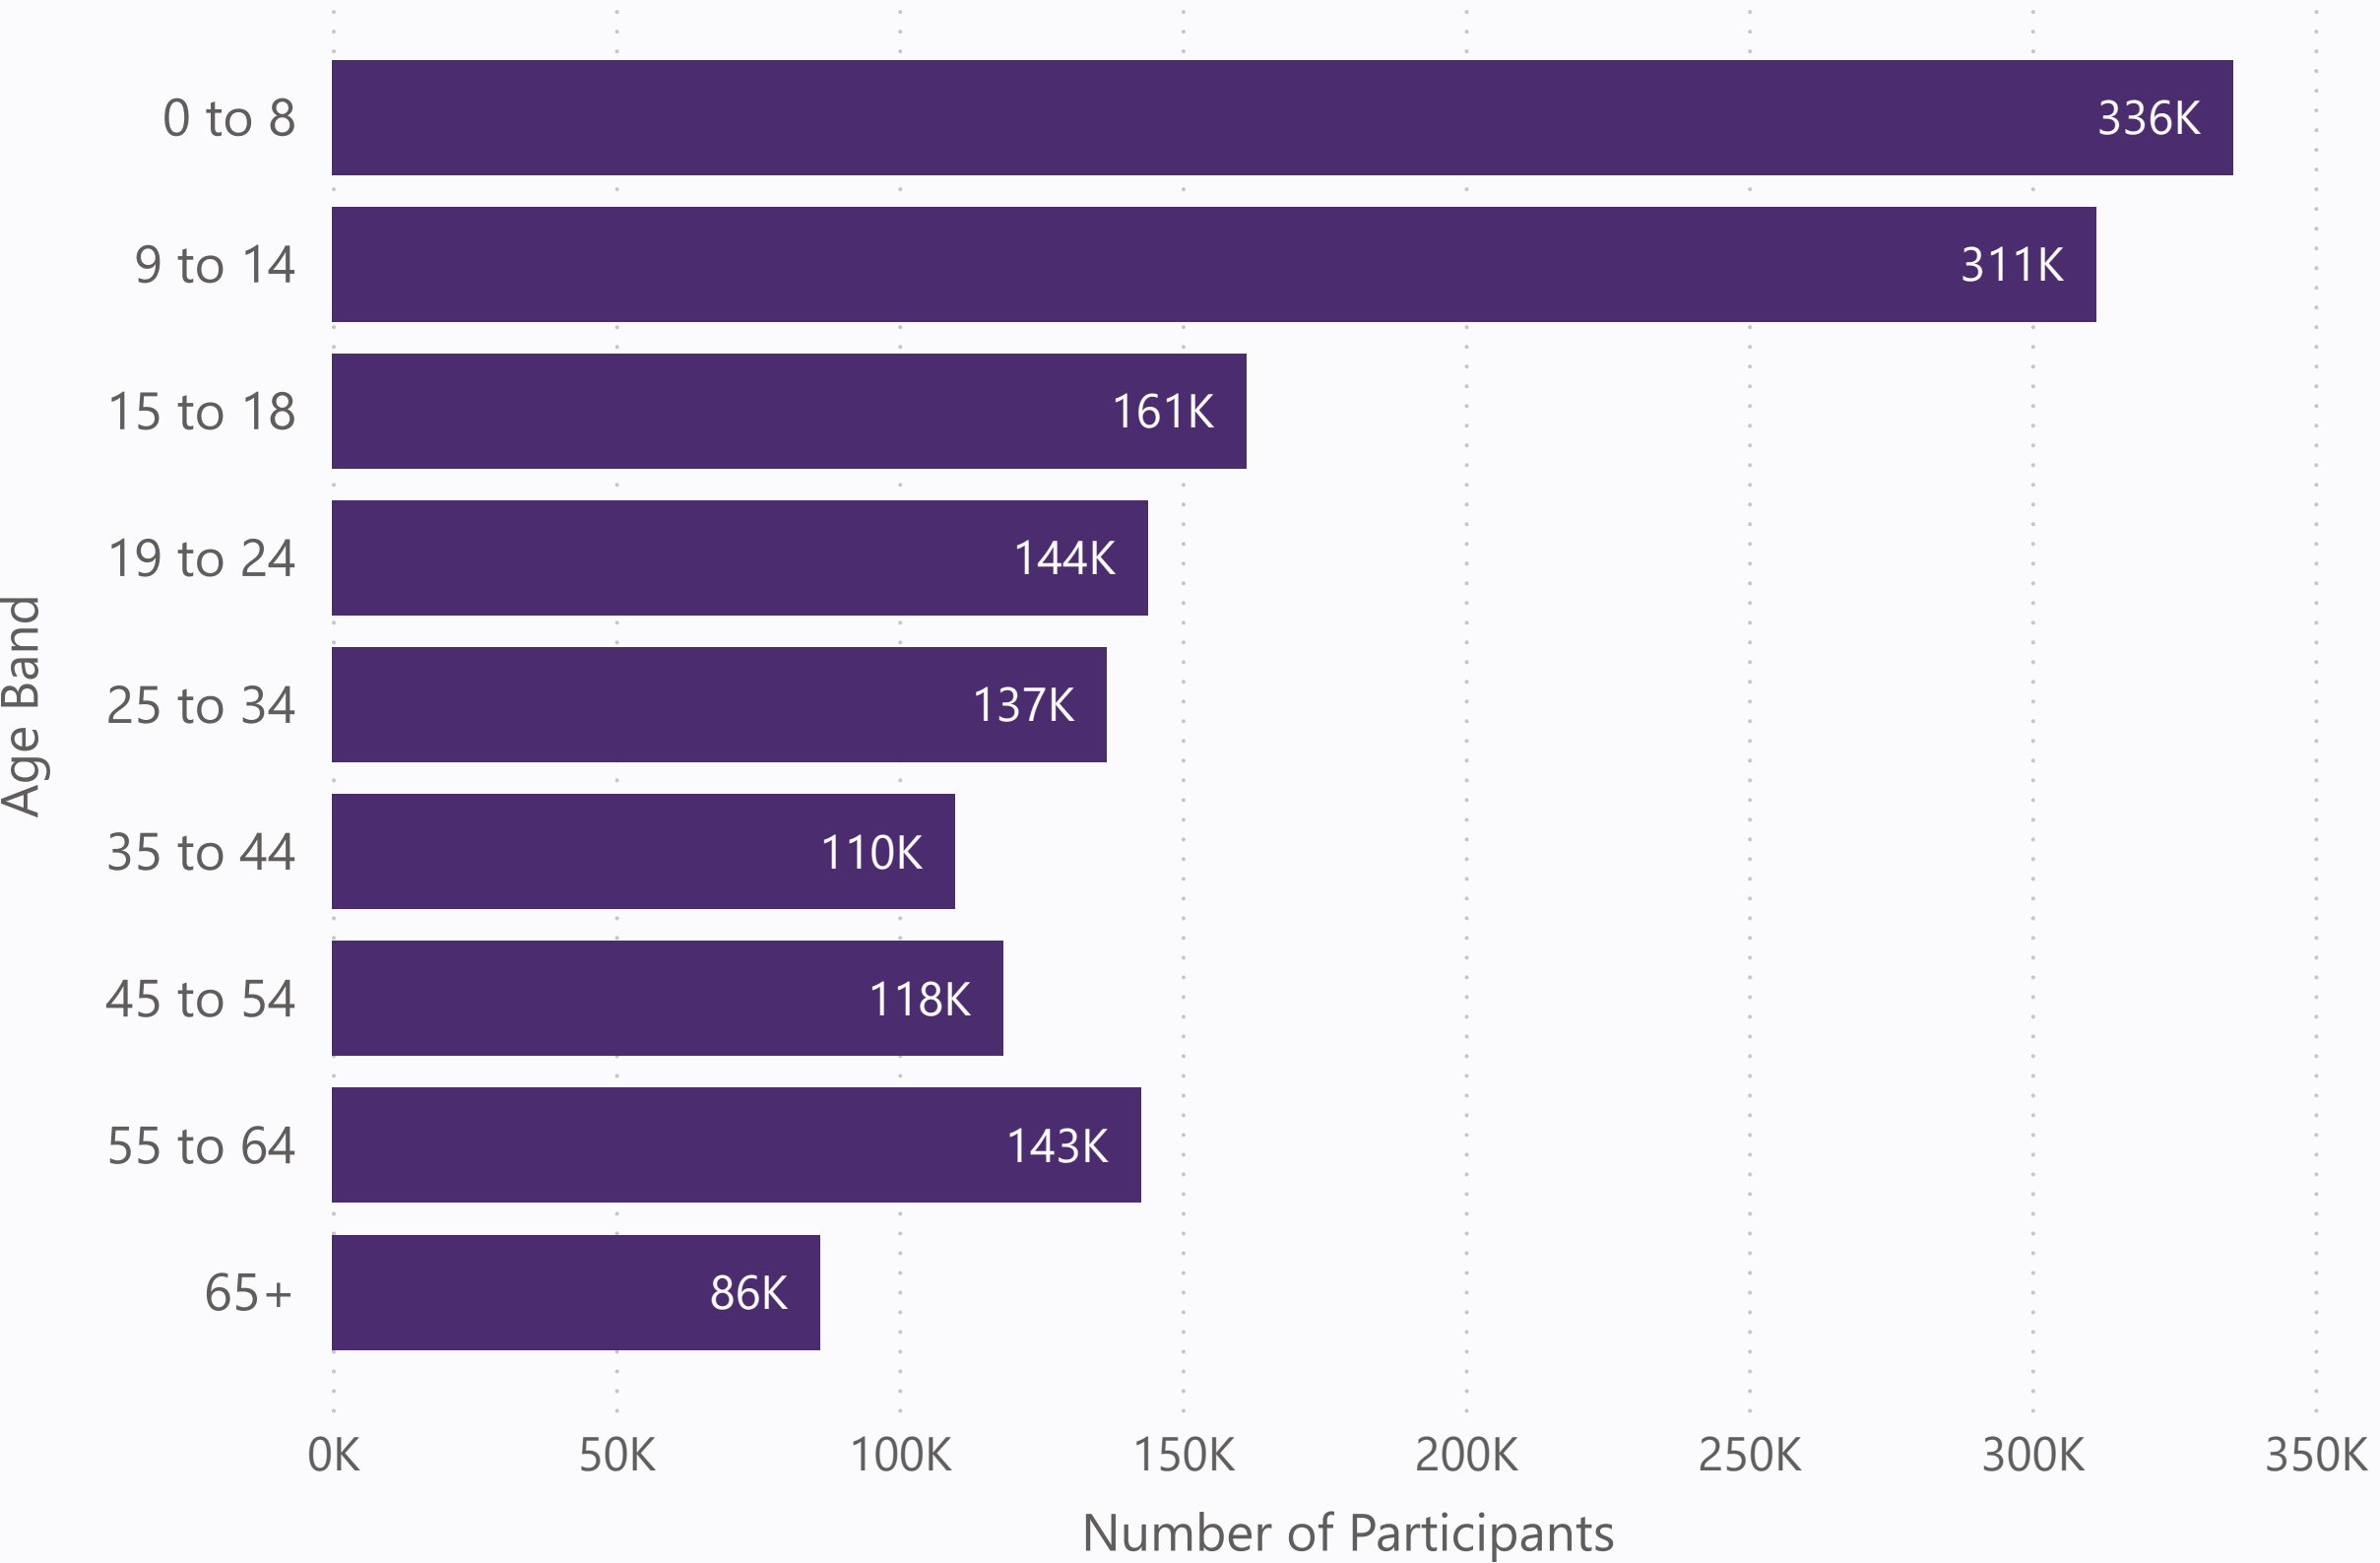

All

Select Age Band

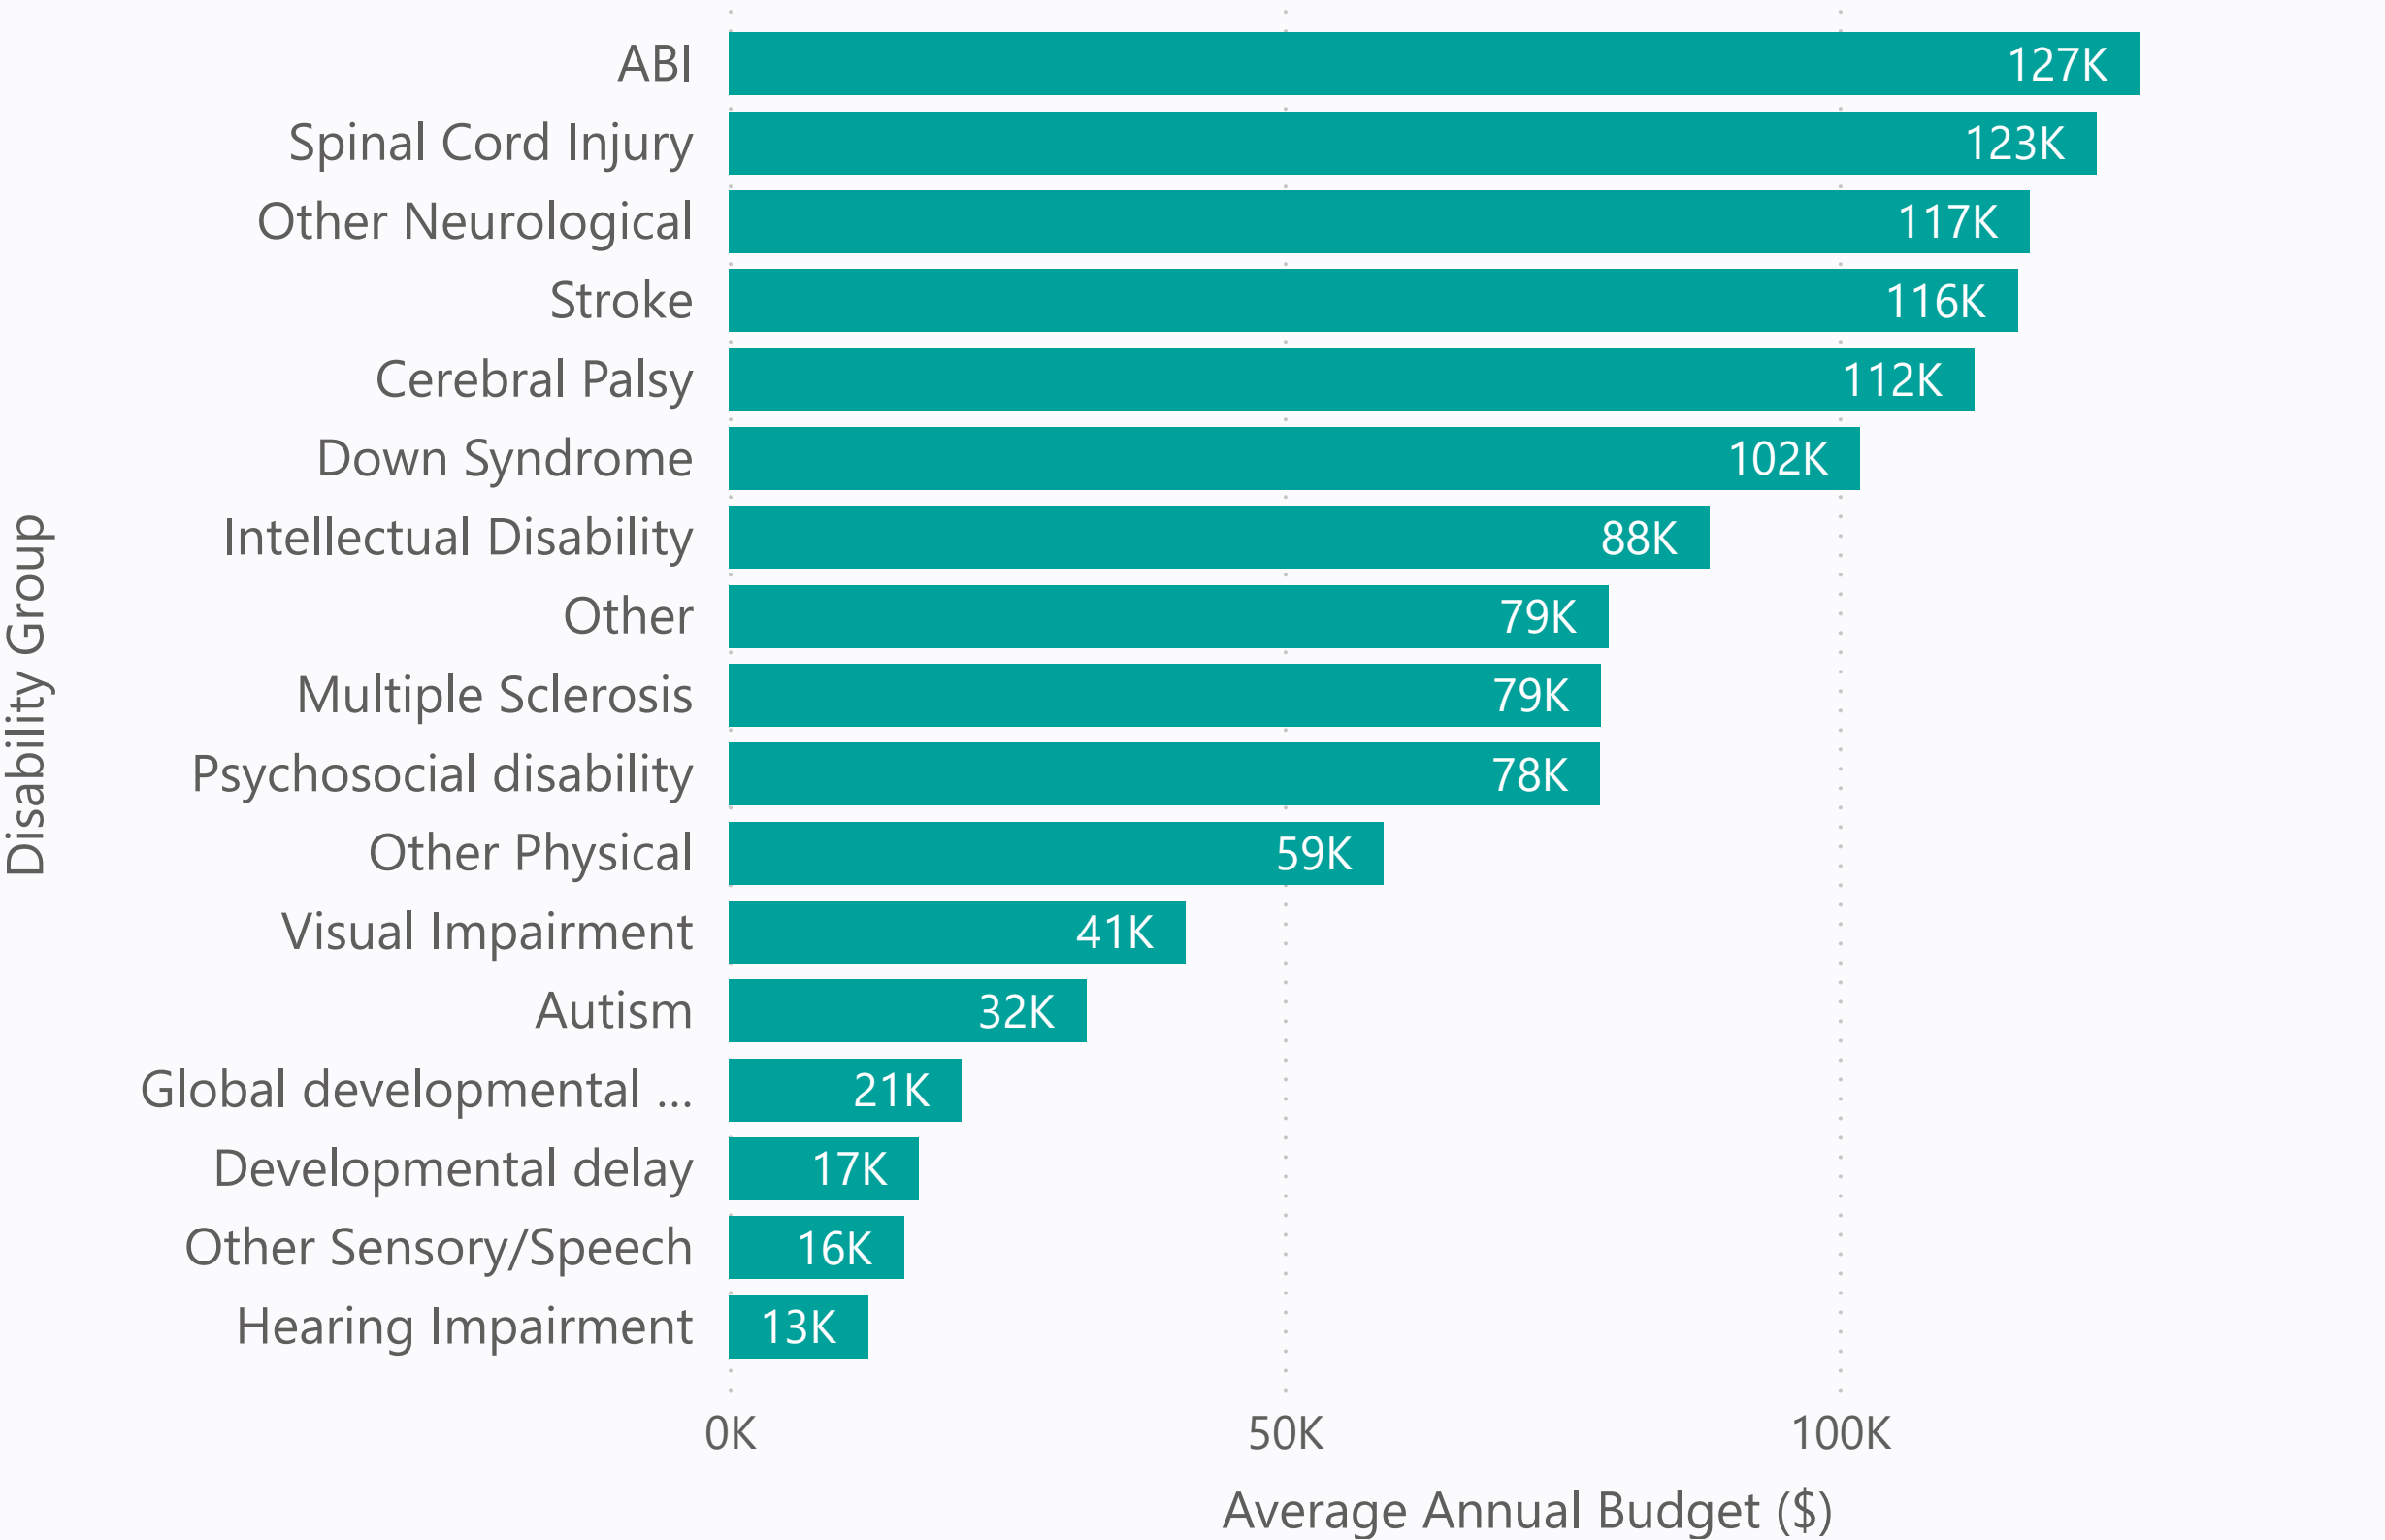

All

Children aged 0–8 represent the largest age cohort on the NDIS, driven by Early Childhood Early Intervention pathway growth. Acquired Brain Injury and Spinal Cord Injury participants have the highest average plan budgets, reflecting complex support needs.

Participants by Age

Average Budget by Disability Group

i Average budgets are weighted by participant count. Suppressed values (< 11 participants) are excluded.

Total Participants

774K

National Utilisation Rate

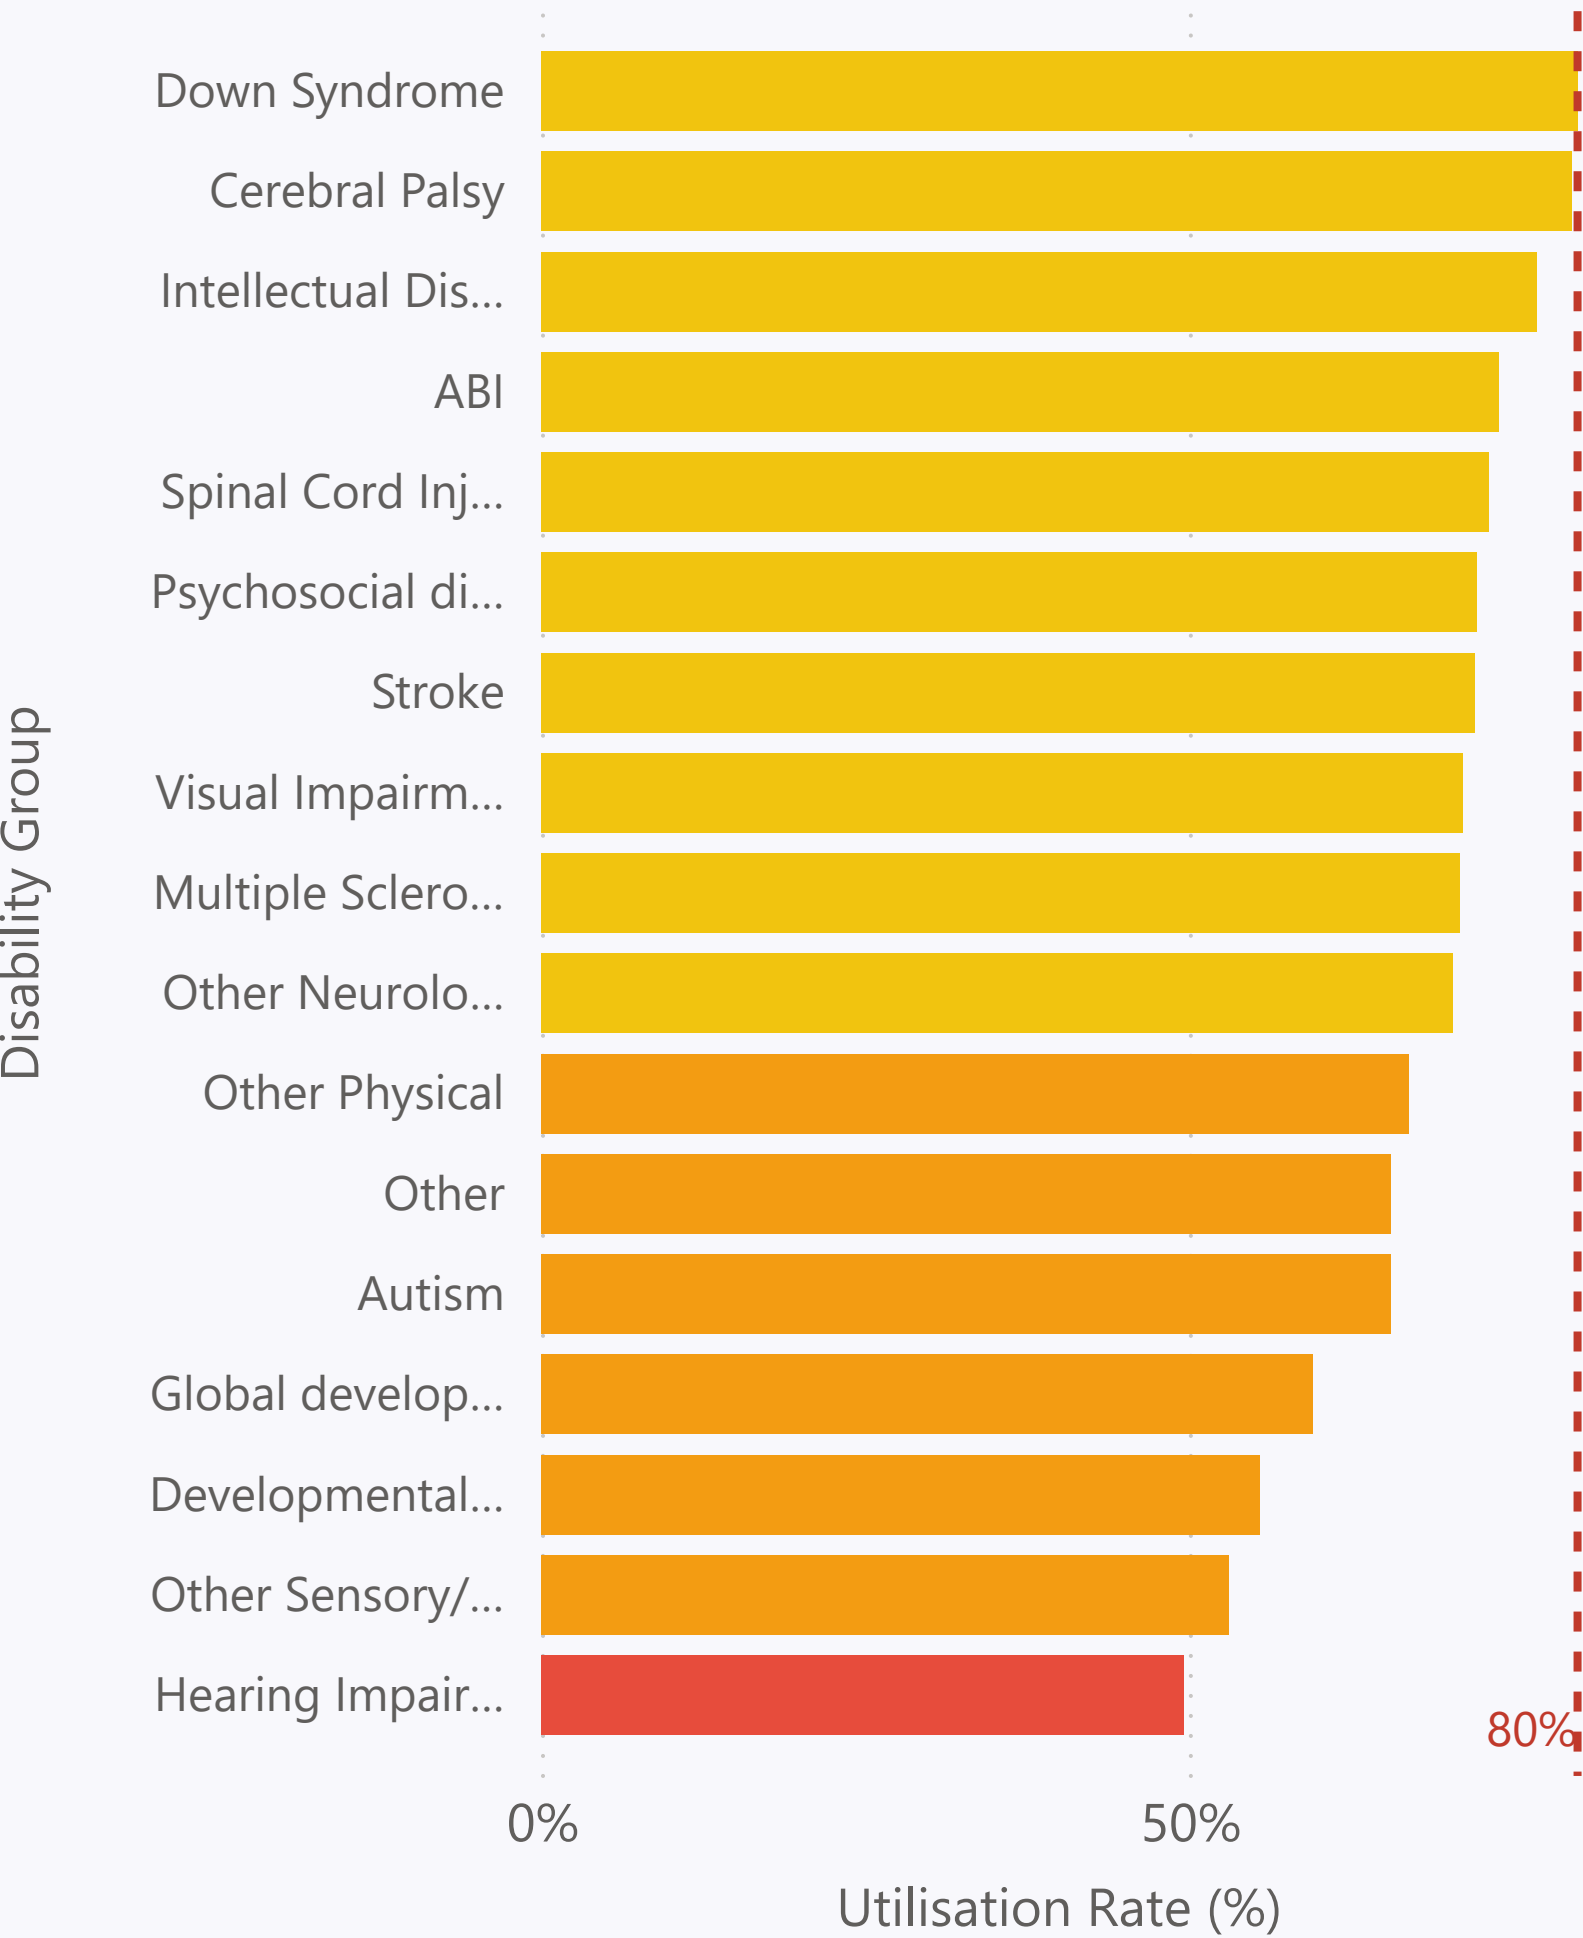

69.7%

Gap to 80% Target

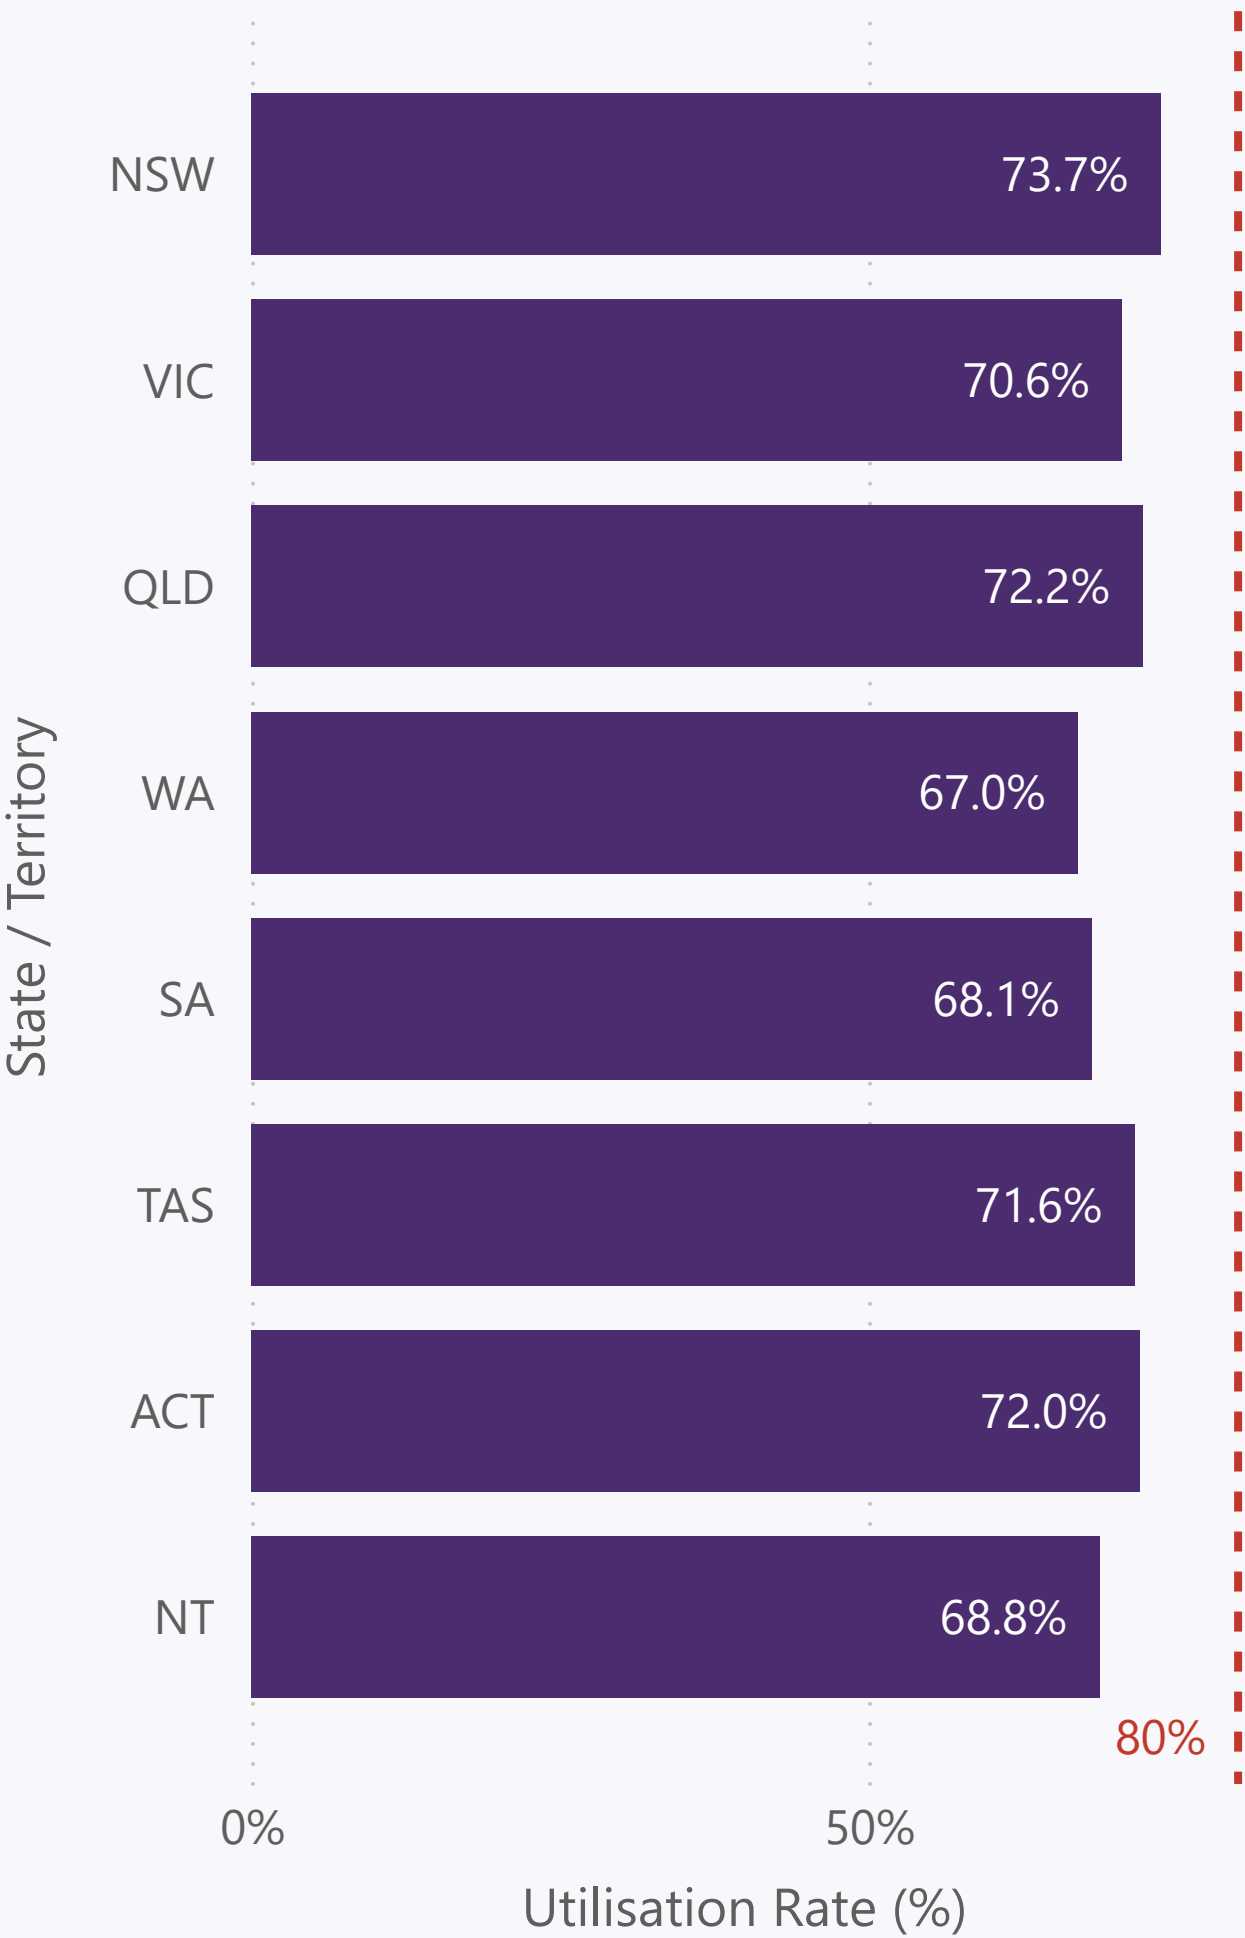

10.3%

National plan utilisation has declined from 73.9% in March 2025 to 69.7% in March 2026, remaining below the 80% NDIS benchmark across all quarters. Capacity Building supports show the lowest utilisation at 56.4%, suggesting participants may face barriers accessing these supports.

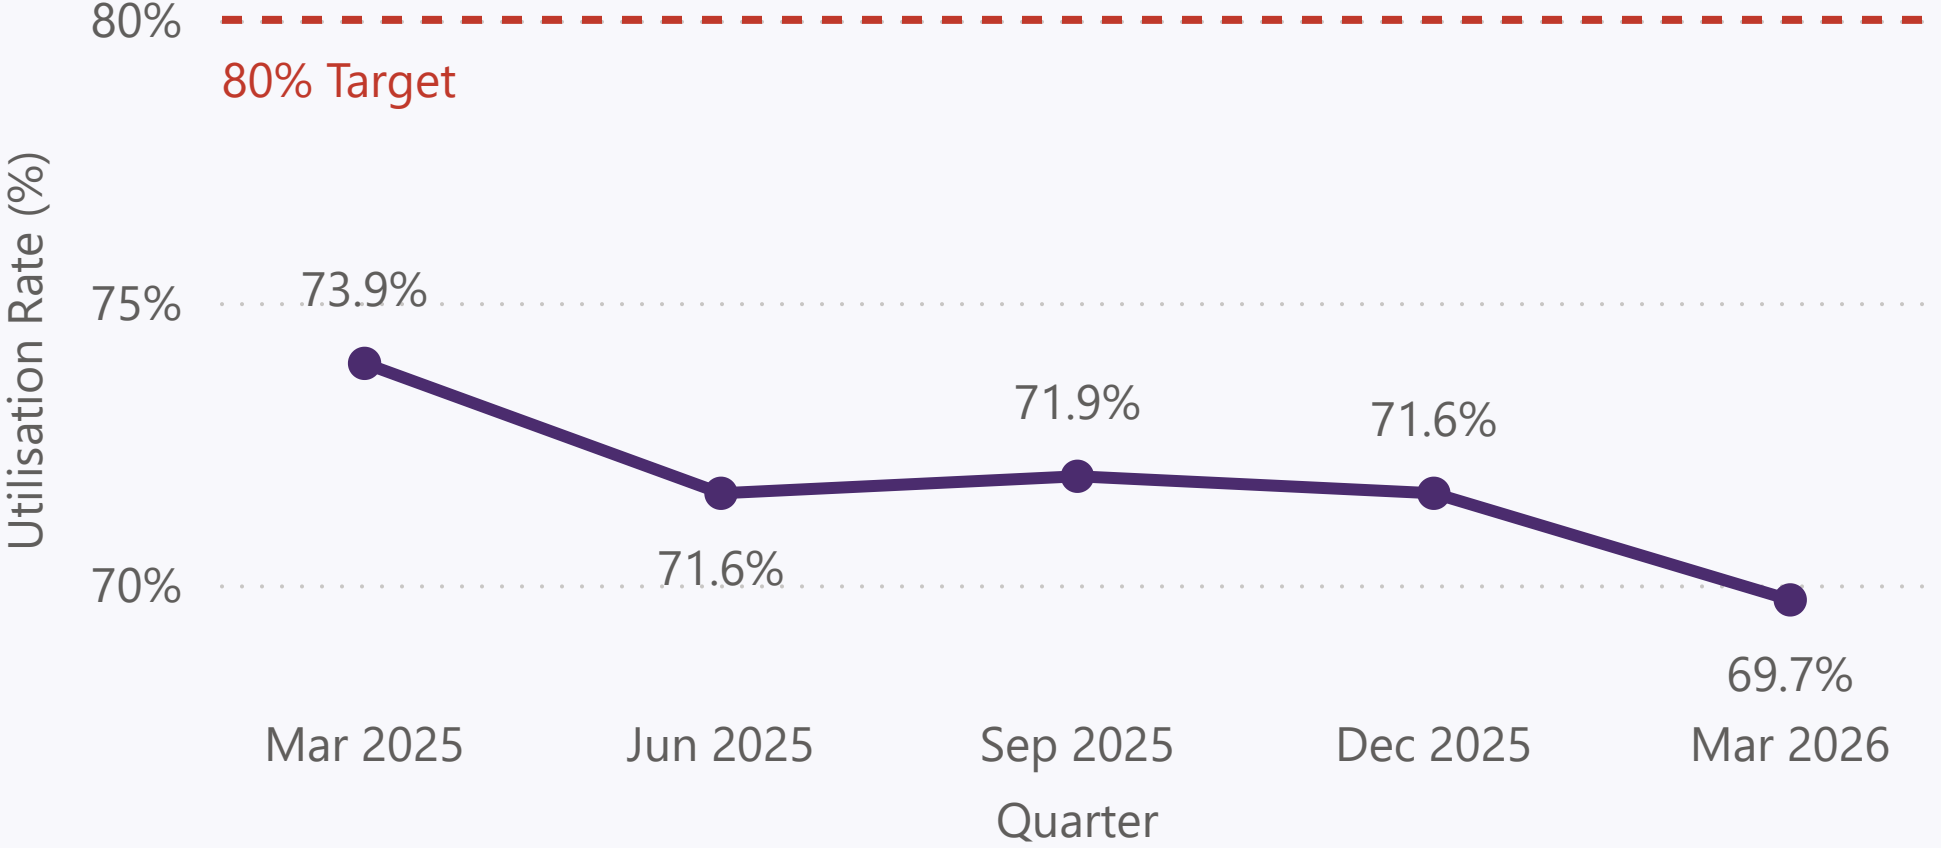

Utilisation Rate by Disability Group

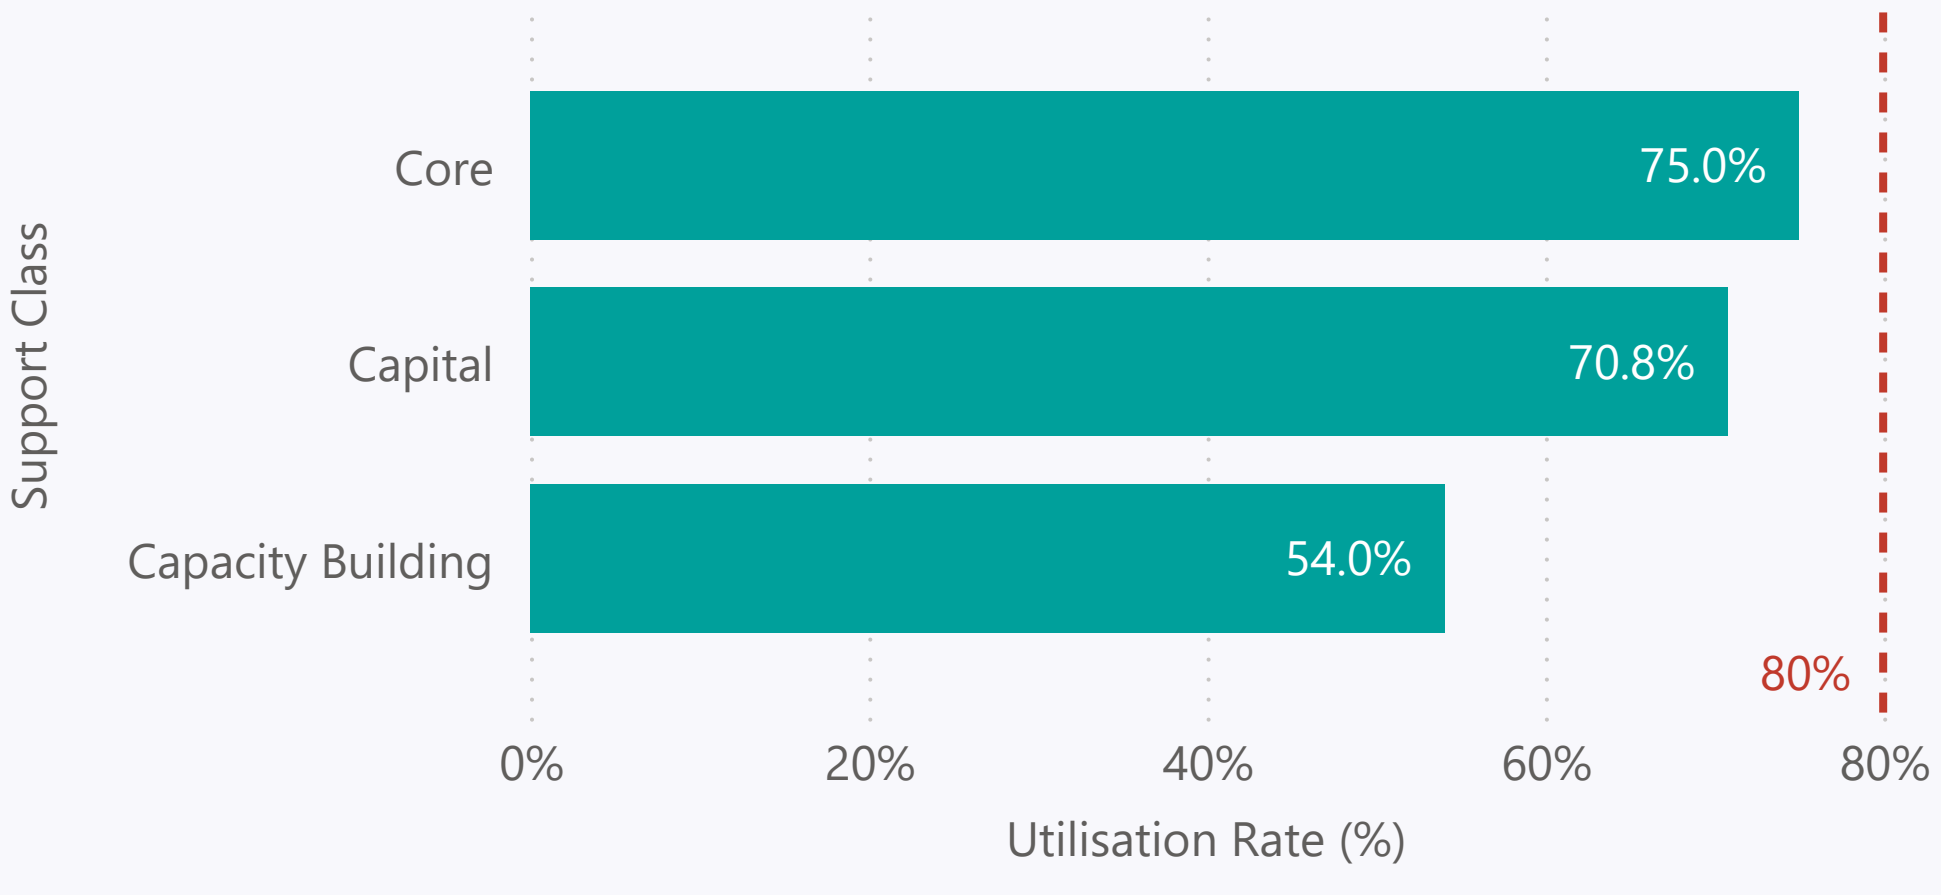

Utilisation Rate by State

National Utilisation Rate by Quarter

Utilisation Rate by Support Class

① Utilisation measures the proportion of plan budget used during a 6-month period ending 3 months prior to the reporting date. For Mar 2026, this covers Jul 2025 – Dec 2025. Source: NDIS Data and Research Portal.

Diagnosis Insights

Primary Diagnoses

773K

Reported Diagnoses

2M

Primary per Reported
Diagnosis

0.47

Select Disability Group

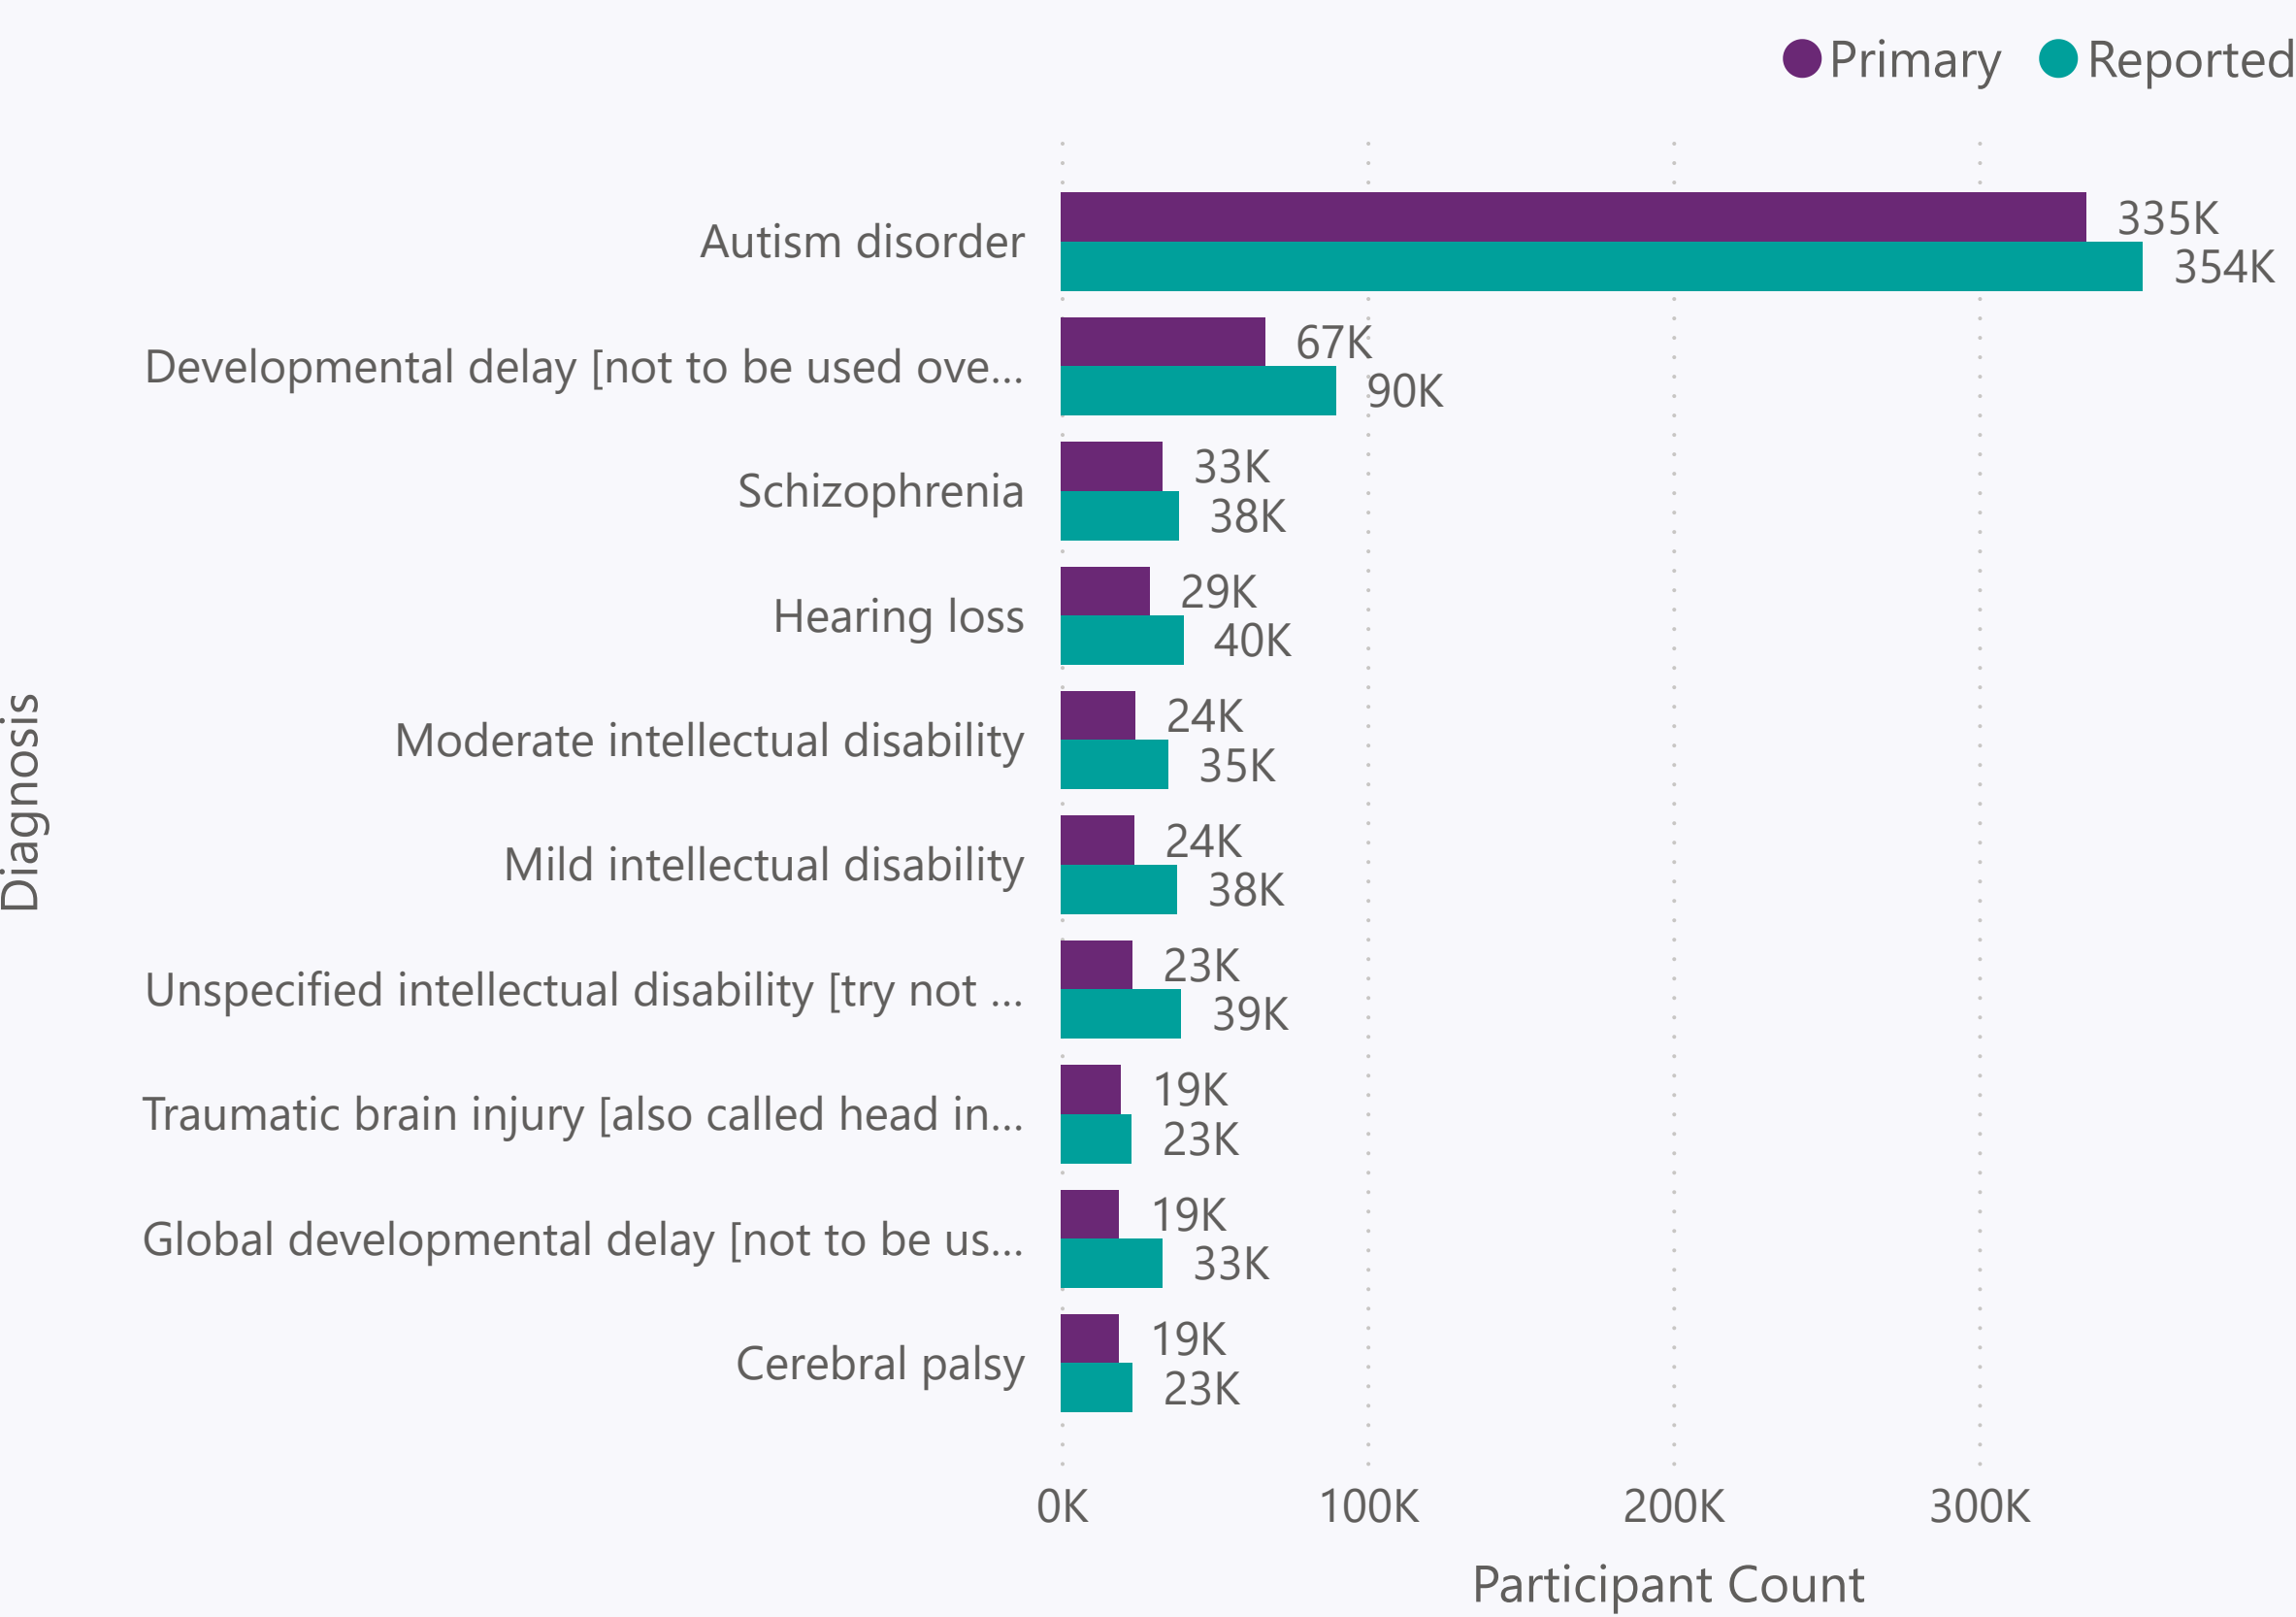

All

Select State

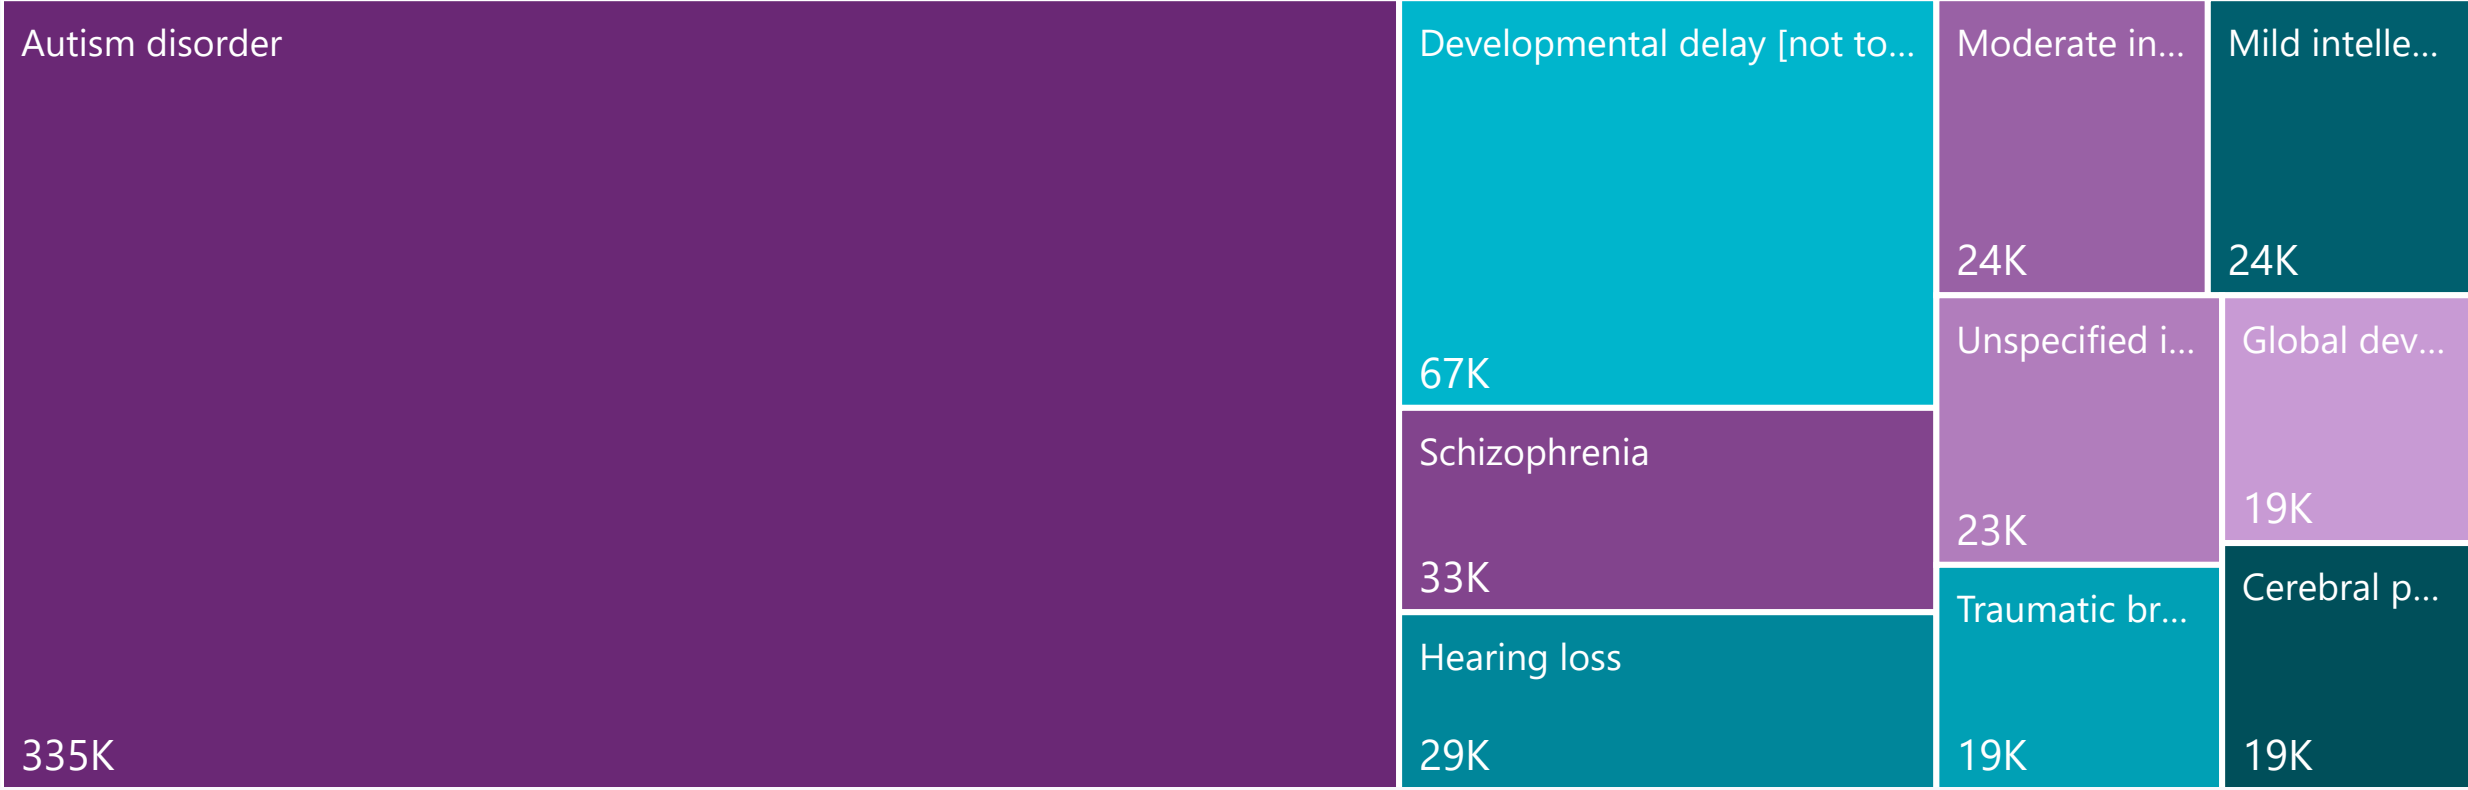

All

Autism disorder accounts for 43% of all primary diagnoses. The 0.47 Primary/Reported ratio indicates participants typically carry more than one diagnosis, reflecting complex comorbidity profiles.

METHODOLOGY AND DATA NOTES

PRE-AGGREGATED "ALL" ROWS

NDIS data contains "ALL" summary rows representing pre-calculated totals. Each visual filters to the correct aggregation level to prevent double counting.

UTILISATION LAG

Rates reflect a 6-month window ending 3 months before reporting date. Mar 2026 = supports Jul-Dec 2025.

PRIVACY SUPPRESSION

Counts ≤ 11 are suppressed by NDIA and stored as null in this dashboard. Totals may be slightly understated.

DIAGNOSIS LIMITATIONS

Self-reported, not NDIA validated. One primary + multiple reported diagnoses. ICD classification used throughout.
